SAFETY DATA SHEET
SODIUM HYDROXIDE 0.1M

SECTION 1: Identification of the substance/mixture and of the company/undertaking

1.1. Product identifier
Product name  SODIUM HYDROXIDE 0.1M
Product number  1098

1.2. Relevant identified uses of the substance or mixture and uses advised against
Identified uses  General chemical reagent Laborotory chemicals
Uses advised against  Processes involving incompatible materials.

1.3. Details of the supplier of the safety data sheet
Supplier  Reagent Chemical Services
18 Aston Fields Road
Whitehouse Industrial Estate
Runcorn
Cheshire WA7 3DL

T: 01928 716903 (08.30 - 17.00)
F: 01928 716425
E: info@reagent.co.uk

1.4. Emergency telephone number
Emergency telephone  OHES Environmental Ltd 24-7
Tel. 0333 333 9939 (24 hour)

SECTION 2: Hazards identification

2.1. Classification of the substance or mixture
Classification (EC 1272/2008)
Health hazards  Not Classified
Environmental hazards  Not Classified

Human health  May irritate eyes and skin.
Environmental  The product is not classed as environmentally hazardous.
Physicochemical  May corrode metal surfaces on prolonged or repeated contact.

2.2. Label elements
Pictogram
SODIUM HYDROXIDE 0.1M

Signal word

Warning

Hazard statements

H290 May be corrosive to metals.

Precautionary statements

P234 Keep only in original container.
P390 Absorb spillage to prevent material damage.

Supplementary precautionary statements

P406 Store in corrosive resistant/... container with a resistant inner liner.

2.3. Other hazards

This substance is not classified as PBT or vPvB according to current EU criteria.

SECTION 3: Composition/information on ingredients

3.2. Mixtures

<table>

Classification
Skin Corr. 1A - H314
Eye Dam. 1 - H318

Classification (67/548/EEC or 1999/45/EC)
C;R35

The Full Text for all R-Phrases and Hazard Statements are Displayed in Section 16.

SECTION 4: First aid measures

4.1. Description of first aid measures

General information

CAUTION! First aid personnel must be aware of own risk during rescue! Always consider any dangers in the vicinity before approaching to treat the casualty. First aid personnel must protect themselves with all necessary personal protective equipment during the assistance of casualties. When breathing is difficult, properly trained personnel may assist the casualty by administering oxygen. Place unconscious person on the side in the recovery position and ensure breathing can take place. Never give anything by mouth to an unconscious person. If breathing has stopped perform CPR. Check airway for any blockages. If medical assistance is needed take as much detail as possible about the incident and hazardous materials involved with the casualty. The following is given as general advice.

Inhalation

Remove affected person from source of contamination. Move affected person to fresh air and keep warm and at rest in a position comfortable for breathing. Get medical attention if any discomfort continues.

Ingestion

Rinse mouth thoroughly with water Do not induce vomiting. Get medical attention.

Skin contact

Immediately remove contaminated clothing and wash before re-use. Rinse immediately with plenty of water. Get medical attention if any discomfort continues.

Eye contact

Promptly wash eyes with plenty of water or eye wash solution while lifting the eyelids. If possible remove any contact lenses and continue to wash. Get medical attention.

4.2. Most important symptoms and effects, both acute and delayed

General information

The severity of the symptoms described will vary dependent on the concentration and the length of exposure.

Inhalation

High concentrations of vapours may irritate the respiratory system.

Ingestion

Small amounts will leave taste in mouth, larger amounts may cause nausea or vomiting. Larger amounts may irritate the digestive system.
## SODIUM HYDROXIDE 0.1M

### Skin contact
May irritate the skin. Prolonged exposure may cause skin conditions such as dryness or eczema.

### Eye contact
May cause eye irritation.

### 4.3. Indication of any immediate medical attention and special treatment needed

#### Notes for the doctor
Have facilities in place to wash skin and eyes in case of exposure.

### SECTION 5: Firefighting measures

#### 5.1. Extinguishing media

<table>
<thead>
<tr>
<th>Suitable extinguishing media</th>
<th>The product is non-combustible. Use fire-extinguishing media suitable for the surrounding fire. Water spray, dry powder, carbon dioxide or alcohol resistant foam.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unsuitable extinguishing media</td>
<td>Do not use water jet as this can spread the fire. Do not use carbon dioxide in enclosed spaces with insufficient ventilation.</td>
</tr>
</tbody>
</table>

#### 5.2. Special hazards arising from the substance or mixture

**Specific hazards**
Fire may produce irritating vapours or fumes. Be aware of dangers from other hazardous materials in the immediate area. Product containers can melt in the heat of a fire. Packaging materials will be combustible and provide fuel for the fire. Contact with metals may form hydrogen gas which is flammable and can result in explosion. Containers of flammable liquids in the area of the fire can explode upon heating.

**Hazardous combustion products**
The product is not combustible but may decompose in the event of a fire. Thermal decomposition or combustion products may include the following substances: Irritating gases or vapours. Sodium hydroxide. When the water component has evaporated there is a possibility that sodium oxides may be formed during fire.

#### 5.3. Advice for firefighters

**Protective actions during firefighting**
Evacuate and keep non-emergency personnel away from the fire area until it is properly extinguished with no danger of re-ignition. Be aware of dangers from other hazardous substances in the immediate area. Prevent run-off from entering drains and watercourses.

**Special protective equipment for firefighters**
Wear positive-pressure self-contained breathing apparatus (SCBA) and appropriate protective clothing.

### SECTION 6: Accidental release measures

#### 6.1. Personal precautions, protective equipment and emergency procedures

**Personal precautions**
The following is given as general advice, precautions and procedures should reflect the extent of a spillage and the situation. Have emergency procedures in place for treating spillages, evacuating the area and informing the emergency services if necessary. Avoid ingestion, inhalation of vapours and contact with skin and eyes. Spill control personnel should wear personal protective clothing and equipment as described in section 8 of this datasheet. Non-emergency personnel should be kept away from the area of spillage.

**Environmental precautions**
Avoid unauthorised discharge to the environment. Do not discharge into drains or watercourses or onto the ground. Clean up any spillages immediately, prevent material from spreading and entering drains or sewage systems. If spillages to land cannot be treated safely or if contamination will occur the Environment Agency must be alerted immediately. Large spillages or uncontrolled discharge to water systems must be alerted to the Environmental Agency or other regulatory body. If the product has entered a foul drain or sewage system in significant amounts to cause a hazard then the local water treatment company must be informed.

**6.3. Methods and material for containment and cleaning up**
SODIUM HYDROXIDE 0.1M

Methods for cleaning up
Small spillages should be absorbed with an inert, non-combustible absorbent. Large spillages: Damp and absorb spillages with sand, earth or other inert material. Fit drain covers where they are available if the spillage is likely to enter the drainage system. Collect and place in suitable waste disposal containers and seal securely. For waste disposal, see Section 13. Containers with collected spillage must be properly labelled with correct contents and hazard symbol. Flush contaminated area with plenty of water. Take care as floors and other surfaces may become slippery. Wash thoroughly after dealing with a spillage.

6.4. Reference to other sections
Reference to other sections Refer to sections 8 and 13 for additional information.

SECTION 7: Handling and storage

7.1. Precautions for safe handling
Usage precautions
Avoid spilling. Avoid contact with skin and eyes. Avoid inhalation of vapours and spray/mists. Avoid ingestion of the product. Do not eat, drink or smoke when handling. Ensure emergency procedures are in place to treat spillages and cope with other situations such as evacuation. Do not use in areas close to drainage systems unless measures are in place to prevent access of product. Wash at the end of each work shift, before eating, drinking, smoking and using the toilet. Remove contaminated clothing/footwear/equipment before entering eating areas or other places that would expose others to the substance. Do not mix with incompatible substances or mixtures. Do not dispose of the substance to the environment through unauthorised means. Do not discharge to land or water including the drainage system.

7.2. Conditions for safe storage, including any incompatibilities
Storage precautions
Store in closed original container at temperatures between 15°C and 25°C. Store away from heat, direct sunlight and moisture. Store away from incompatible materials. It is advisable to store in a bunded area or use other protective measures such as a sump pallet or storage tray. Store in a stable situation to avoid spillages. Avoid freezing conditions. If the mixture is transferred to another container then this should be made of a compatible material. Consult with the packaging manufacturer about suitability. Do not store in containers made of aluminium or other light metals.

Storage class
Corrosive storage.

7.3. Specific end use(s)
Specific end use(s) The identified uses for this product are detailed in Section 1.2.

Usage description
Use product under conditions described in this datasheet. Avoid exposure of operators and others who may be affected by its use. Avoid overuse of the product which would create waste and potential spillages. Always use recommended personal protective equipment. Only use the product for its intended use in a safe manner, do not use for other purposes.

SECTION 8: Exposure Controls/personal protection

8.1. Control parameters
Occupational exposure limits
SODIUM HYDROXIDE
Short-term exposure limit (15-minute): WEL 2 mg/m³
WEL = Workplace Exposure Limit

Biological limit values
No information available, No information available, No information available No information has been received from the manufacturers of the substance.
SODIUM HYDROXIDE 0.1M

DNEL
Industry - Inhalation; Long term local effects: 1 mg/m³
Refers to sodium hydroxide as a substance.
Consumer - Inhalation; Long term local effects: 1 mg/m³

PNEC
No information available for PNEC of constituents.

SODIUM HYDROXIDE (CAS: 1310-73-2)

DNEL
Workers - Inhalation; Long term local effects: 1 mg/m³
General population - Inhalation; Long term local effects: 1 mg/m³

8.2. Exposure controls
Appropriate engineering controls
Provide adequate general and local exhaust ventilation. If vapours or mists are generated, work in a fume cupboard.

Eye/face protection
Wear approved chemical safety goggles conforming to EN 166.

Hand protection
Use full length gloves. Polyvinyl chloride (PVC). Viton rubber (fluoro rubber). Butyl rubber. Nitrile rubber. The most suitable glove should be chosen in consultation with the glove supplier/manufacturer, who can provide information about the breakthrough time of the glove material. For gloves involving total immersion 1.0mm thickness (if available) are recommended, at least 0.5mm and breakthrough time of >480 minutes. For splash resistance use minimum 0.5mm thickness and breakthrough time > 240 minutes. Gloves should have a breakthrough time sufficient for the amount of handling but allow dexterity for safe movement and handling. Gloves should conform to EN 374 (Chemical and Micro-organisms hazards). It should be noted that liquid may penetrate the gloves. Frequent changes are recommended. When removing used gloves apply proper technique by avoiding skin contact with the outer surface. When packages of the product are being handled during storage or transport it is advisable to wear protective gloves to prevent damage to the skin.

Other skin and body protection
Wear suitable protective clothing during transport, handling and storage operations connected with the product. Protective clothing should conform to the general requirements of EN 340:2003. Also consider EN 13034:2005; EN 14605:2005; EN 943:2002 dependent upon the situation resulting in exposure. Wear suitable protective footwear during handling of the product. When treating spillages it is recommended to wear protective boots, consult with the supplier as to the compatibility. Safety footwear should conform to standards EN 344 - 347. Wear plastic apron and full length gloves if handling large amounts. If there is a risk of splashing then wear a face shield. Have facilities in place to wash eyes in case of contact. If handling large amounts it is recommended to have a safety shower.

Hygiene measures
If clothing becomes contaminated with large amounts or would otherwise result in exposure to the mixture, remove and wash before re-use. Do not eat, drink or smoke in the work area. Wash at the end of each work shift and before eating, smoking and using the toilet.

Respiratory protection
Wear suitable respiratory protection when vapours or mists are generated and there is inadequate ventilation or extraction. When the concentration of atmospheric vapours is sufficient to cause skin irritation it is advisable to wear full face respiratory protection. Use respirator fitted with cartridge suitable for inorganic vapours including the substance of concern, type B is recommended. When a particulate respirator is used it is recommended to use at least Type P2, preferably P3. Consult with the supplier as to the compatibility of the equipment with the chemical of concern. CAUTION: Air purifying respirators do not protect the user in oxygen deficient atmospheres, use air supplied system. Respiratory protection should conform to the following standards. BS EN 136: Full face masks. BS EN 140: Half-face masks. BS EN 143: Particulates. Powered air respirators should meet requirements of EN146 and EN12941. Airline fed respirators should meet the requirements of EN 270 and EN1835. Respiratory protection should be maintained in a proper condition and inspected at the frequency specified by current legislation.
SODIUM HYDROXIDE 0.1M

Environmental exposure controls
See section 6 for details.

SECTION 9: Physical and Chemical Properties

9.1. Information on basic physical and chemical properties

- **Appearance**: Liquid.
- **Colour**: Colourless.
- **Odour**: Odourless.
- **Odour threshold**: Not applicable. Not applicable.
- **pH**: pH (concentrated solution): 14
- **Flash point**: Not relevant.
- **Evaporation rate**: Not determined.
- **Evaporation factor**: Not determined.
- **Flammability (solid, gas)**: No.
- **Upper/lower flammability or explosive limits**: Not relevant. The mixture is non-flammable. The mixture is non-flammable.
- **Vapour pressure**: Not determined.
- **Vapour density**: Not determined.
- **Relative density**: Approx. 1.0 @ 20 @ °C
- **Bulk density**: Not applicable. Only applicable to solids.
- **Solubility(ies)**: Not applicable. Miscible with water. The product is completely miscible with water.
- **Partition coefficient**: Not determined.
- **Auto-ignition temperature**: Not relevant.
- **Decomposition Temperature**: Not determined.
- **Viscosity**: Not determined.
- **Explosive properties**: The mixture itself is not explosive but can produce hydrogen gas on reaction with metals which is explosive. More sensitive to shock than m-dinitrobenzene: No. More sensitive to friction than m-dinitrobenzene: No.
- **Explosive under the influence of a flame**: No
- **Oxidising properties**: Not applicable.

9.2. Other information

Not available. Not determined.

SECTION 10: Stability and reactivity

10.1. Reactivity

- **Reactivity**: May react vigorously. May react exothermically with acids. Reaction with metals can produce hydrogen gas which can form explosive atmospheres. Aluminium Zinc Tin and tin oxides.

10.2. Chemical stability
SODIUM HYDROXIDE 0.1M

Stability
Air sensitive. Will form carbonates on reaction with atmospheric carbon dioxide. Stable when stored in sealed container at normal temperatures and in a suitable location.

10.3. Possibility of hazardous reactions
Possibility of hazardous reactions
Hazardous reactions as specified in section 10.1. Heat and gaseous products may be formed that would build up pressure in a sealed container, do not mix with incompatible materials. Will not polymerise.

10.4. Conditions to avoid
Conditions to avoid
Avoid heat, direct sunlight and moisture. Avoid contact with acids. Avoid storage in freezing conditions. Avoid storage with incompatible materials. Avoid exposure to the atmosphere, product is air sensitive. Avoid storage in an unstable manner or in a situation that would result in exposure to the product. Avoid storage near to unprotected drainage systems. It is advisable to store the product within some form of containment to prevent spillages reaching drainage systems.

10.5. Incompatible materials
Materials to avoid
Aluminium, zinc, tin (formation of hydrogen). Acids. Halogenated organic compounds incompatible packaging materials, the mixture will attack some metals and plastics. Consult with the supplier as to suitability.

10.6. Hazardous decomposition products
Hazardous decomposition products
Does not decompose when used and stored as recommended. See section 5 for hazardous combustion products.

SECTION 11: Toxicological information

11.1. Information on toxicological effects
Toxicological effects
The mixture has not been tested for toxicological properties. Information on toxicological properties has not been received from the manufacturer or supplier.

Acute toxicity - oral
Notes (oral LD₅₀)
No information available. No reliable information.

Acute toxicity - dermal
Notes (dermal LD₅₀)
No information available. No reliable information.

Acute toxicity - inhalation
Notes (inhalation LC₅₀)
No information available. No reliable information.

Skin corrosion/irritation
Animal data
Dose: 0.5ml of 5% w/v solution, 2 hr, Rabbit Primary dermal irritation index: 4.33 after 1 hour to 3.1 after 7 days. Erythema/eschar score: 2.6 at 24 hours Oedema score: 1.5 at 24 hours Tests on rabbits for up to 8 days showed the solution to be irritating. At or above 5% w/w sodium hydroxide is classed as corrosive to skin causing severe burns. OECD Guideline 404 (Acute Dermal Irritation / Corrosion) Corrosive to skin.

Serious eye damage/irritation
Serious eye damage/irritation
Below 2%w/w solutions are irritating. At or above 2% w/w they are corrosive. Tests on rabbits, OECD Guideline 405, Acute eye Irritation / Corrosion.

Skin sensitisation
Skin sensitisation
Patch test - Human: Industry - Dermal; Long term systemic effects 22 mg/kg/day Not sensitising.

Germ cell mutagenicity
SODIUM HYDROXIDE 0.1M

Genotoxicity - in vitro
Gene mutation: Negative. No reliable information. Despite information being unreliable the results from all tests were negative for genotoxicity.

Genotoxicity - in vivo
Chromosome aberration: Negative. Result obtained for micronucleus assay on mouse showed negative results. Chromosome aberration on grasshoppers showed some positive results. Information is unreliable but the majority of test results are negative.

Carcinogenicity
Scientifically unjustified.

Reproductive toxicity
No information available. No supplied or registered information.

Reproductive toxicity - fertility
Fetotoxicity - Dose level: 2 microlitre doses of 0.001M NaOH Industry - Dermal; Long term systemic effects 22 mg/kg/day, , Mouse Unreliable information. 2 microlitre doses of 0.001 M sodium hydroxide produced mortality in approx. 46% of fetuses.

Specific target organ toxicity - single exposure
STOT - single exposure
No information available.

Specific target organ toxicity - repeated exposure
STOT - repeated exposure
No information available. Unreliable information.

Inhalation
Vapours or mists in high concentration may cause irritation to the respiratory system.

Ingestion
May irritate mouth, throat and gastrointestinal tract. Small amounts can cause a feeling of nausea, larger amounts may produce vomiting.

Skin contact
May cause irritation on prolonged or repeated contact.

Eye contact
May irritate the eyes.

SECTION 12: Ecological Information

Ecotoxicity
Although not classified as environmentally hazardous, harmful effects cannot be excluded in the event of improper handling or disposal. There is a possibility that the mixture could produce a local alkaline pH shift in the aquatic environment. Do not allow to enter drinking water, waste water or soil.

12.1. Toxicity
Toxicity
The following information refers to the toxicity of sodium hydroxide in general. The acute effects on fish are the damaging effect on fins due the increase in alkalinity. As pH increases above 9 the mortality rate increases. Outside the range of pH6.5 to 9.0 freshwater fish suffer adverse physiological effects increasing in severity until lethality is reached. Marine life suffers outside pH 6.5 to 8.5 due to the larger buffering capacity of salt water producing a more stable pH and a reduced tolerance to pH change.

Acute toxicity - fish
Industry - Dermal; Long term systemic effects 22 mg/kg/day
LC50, 96 hours: < 180 mg/l, Cyprinus carpio (Common carp)
This was a study on mortality.
Unreliable information.

Acute toxicity - aquatic invertebrates
EC50, 48 hours: 40.4 mg/l, Industry - Dermal; Long term systemic effects 22 mg/kg/day
Species: Ceriodaphnia sp.
Immobility

Acute toxicity - aquatic plants
Scientifically unjustified.
SODIUM HYDROXIDE 0.1M

Acute toxicity - microorganisms
Not available.

Acute toxicity - terrestrial
Not available.
No supplied or registered information

Chronic toxicity - fish early life stage
Not available.
The registered information is unreliable. Semi-static, freshwater tests on guppies showed adverse effects on survival rate and growth. 25 to 100 mg/l produced significant changes in the biology of the fish.

Short term toxicity - embryo and sac fry stages
Not available.

Chronic toxicity - aquatic invertebrates
Scientifically unjustified.

Toxicity to soil
No registered or supplied information.

Toxicity to terrestrial plants
No registered or supplied information.

12.2. Persistence and degradability
Phototransformation
Not relevant.
Water - Industry - Dermal; Long term systemic effects 22 mg/kg/day :

Stability (hydrolysis)
Scientifically unjustified.
When dissolved in water, sodium hydroxide dissociates to form hydroxide ions. This dissociation is reduced as the pH increases.

Biodegradation
Scientifically unjustified.

Biological oxygen demand
No information available. No supplied or registered information

Chemical oxygen demand
No information available. No supplied or registered information

12.3. Bioaccumulative potential
Bioaccumulative potential
Scientifically unjustified. Due to its high water solubility, sodium hydroxide is not expected to bioaccumulate. It is an inorganic compound.

Partition coefficient
Not determined.

12.4. Mobility in soil
Mobility
Sodium hydroxide is present in the environment as sodium and hydroxyl ions. The product is miscible with water and will spread in water systems. It will be absorbed into soil with the possibility of travelling into groundwater when large or continuous discharges occur. Sodium hydroxide solutions will penetrate further into the soil as dilution increases. Some ion exchange will occur, sodium will become part of the naturally occurring sodium in the environment. There is the possibility that some hydroxide will remain in solution and travel towards groundwater.

Adsorption/desorption coefficient
Scientifically unjustified.

Henry's law constant
Not available. No supplied or registered information

Surface tension
Not available. No supplied or registered information

12.5. Results of PBT and vPvB assessment
Results of PBT and vPvB assessment
This product does not contain any substances classified as PBT or vPvB.
SODIUM HYDROXIDE 0.1M

12.6. Other adverse effects
Other adverse effects
May create a local pH change in soil which can have a damaging effect on crops. Discharge into a foul drain can be a hazard to operators working on the system. Will affect drinking water supplies.

SECTION 13: Disposal considerations

13.1. Waste treatment methods
General information
Any waste material is classed as hazardous waste, it should only be disposed of through licenced waste handlers and treatment sites. Do not allow unauthorised disposal to the environment. If operators are exposed to vapours during the disposal process then suitable respiratory protection should be worn. All other personal protective equipment as described in section 8 should be worn.

Disposal methods
Dispose of waste to licensed waste disposal site in accordance with the requirements of the local Waste Disposal Authority. Avoid unauthorised disposal. Do not dump illegally onto land or into water. Uncleaned empty containers should be treated as hazardous waste. Waste material should not be disposed of directly to drain. Neutralisation is recommended before disposal, this should be carried out by a reputable waste disposal company. IF WASTE IS NEUTRALISED ON SITE BE AWARE THAT A VIGOROUS AND EXOTHERMIC REACTION MAY OCCUR. When dealing with waste always consider the waste management hierarchy of Prevention, Preparation for re-use, Recycling, Recovery and Disposal. It is advisable to minimise waste at source if possible, then re-use, recover or recycle wherever possible before considering waste disposal options.

SECTION 14: Transport information

14.1. UN number
UN No. (ADR/RID) 1824
UN No. (IMDG) 1824
UN No. (ICAO) 1824

14.2. UN proper shipping name
Proper shipping name (ADR/RID) SODIUM HYDROXIDE SOLUTION
Proper shipping name (IMDG) SODIUM HYDROXIDE SOLUTION
Proper shipping name (ICAO) SODIUM HYDROXIDE SOLUTION
Proper shipping name (ADN) SODIUM HYDROXIDE SOLUTION

14.3. Transport hazard class(es)
ADR/RID class 8
ADR/RID label 8
IMDG class 8
ICAO class/division 8
Transport labels

14.4. Packing group
SODIUM HYDROXIDE 0.1M

ADR/RID packing group III
IMDG packing group III
ICAO packing group III

14.5. Environmental hazards

Environmentally hazardous substance/marine pollutant
No.

14.6. Special precautions for user

EmS F-A, S-B

Emergency Action Code 2R

Hazard Identification Number (ADR/RID) 80

Tunnel restriction code (E)

14.7. Transport in bulk according to Annex II of MARPOL and the IBC Code

Transport in bulk according to Annex II of MARPOL 73/78 and the IBC Code Not applicable.

SECTION 15: Regulatory information

15.1. Safety, health and environmental regulations/legislation specific for the substance or mixture

National regulations Industry - Dermal; Long term systemic effects 22 mg/kg/day

Guidance Industry - Dermal; Long term systemic effects 22 mg/kg/day

ECHA Guidance on the compilation of safety data sheets 2014.

15.2. Chemical safety assessment

Information from the manufacturer of the raw material has not been received regarding Chemical Safety Assessments, Exposure Scenarios or a Chemical Safety Report.

SECTION 16: Other information

General information This datasheet is not intended to be a replacement for a full risk assessment, these should always be carried out by competent persons.

Key literature references and sources for data Raw material safety data sheets. ECHA website.
